The present invention relates to coding sequences of the murine 1F7 anti-idiotypic antibody complementarity-determining region (CDR) or framework-determining region (FR). The antibody binds to human or primate anti-human immunodeficiency virus (HIV) antibodies and can be used in the treatment of HIV infection. The present sequence is the 1F7 light chain coding sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     241 Gridoaddaddaddrigcaaccrarracrercagcrrrgraardaggarccreccace 300

                                                                                                                                                                              The present invention relates to coding sequences of the murine 1F7 anti-idiotypic antibody complementarity-determining region (CDR) or framework-determining region (FR). The antibody binds to human or primat anti-human immunodeficiency virus (HIV) antibodies and can be used in the treatment of HIV infection. The present sequence is the 1F7 light chain

The present sequence encodes the light chain variable region of murine interleukin-4 (IL-4) antibody 3B9. The sequences are used in the production chimeric and humanised IL-4 monotonal antibodies. The antibodies of the invention are used in therapeutic and pharmaceutical compositions for treating IL-4 mediated and Immunoglobulin E-mediated allergic reactions e.g. allergic resonunctivitis, atopic dermatitis, atopic asthma, anaphylactic shock, rheumatoid arthritis, host-versus-graft disease and renal disease. They are also useful in the diagnosis of an allergy or condition associated with excess IL-4 production through the measurement e.g. b BLISA of circulating endogenous IL-4 levels in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides an antibody having affinity to CD4 antigen. Th anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. The present sequence represents the antibody 4H5 L chain fragment encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The antibody is a chimeric or humanised interleukin-4 (IL4) monoclonal antibody for the treatment of immunoglobulin E (IgE) mediated diseases. The antibodies are useful for the treatment of allergic disorders such as allergic rhinitis, conjunctivitis, atopic dermatitis, atopic astma and anaphylactic shock. The antibodies are also useful for regulating B and T cell proliferation and as such are useful in the treatment of autoimmune diseases and graft

The devices are useful for the separation of CD4 or CD4 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases. This sequence encodes a murine derived protein fragment which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 GACATIGIGCEGACCCAATCTCCAGCTTCTTTGGCTGTGTCTTAGGGCAGAGGGCCACC 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Devices containing antibodies recognising CD4 or CD34 and their use for the separation of CD4 or CD34 positive cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 GACATTGTGCTCACCAATTCTCCAGCTTCTTTGGCTGTGTCTCTAGGGCCAGAGGGCCACC

This nucleotide sequence codes for the light chain (see AAW83042) of murine anti-human Fas monoclonal antibody HFE7A. The cDNA was contained from HFE7A secreting hybridoma cells (FERM BP-9818) by FATPCR (see AAV70127-28). The invention provides humanised versions of HFE7A (see AAW83031-37) which, like HFE7A, are capable of inducing apoptosis in abnormal cells. The humanised antibodies has in adminised antibodies are used to evaluate, in animal models, treatments of diseases that involve Pass/Pas lidgand interactions, and also to treat such diseases, including autoimmune disease (e.g. systemic lupus erythematosus, Habilmoto's disease, graft versus host disease, Sjogren syndrome, pernicious anaemia, Addison's disease, rheumatoid arthritis, autoimmune haemolytic anaemia, sterility, myasthenia gravis, multiple solerosis, Basedow's disease, thrombopenia purpura and insulin-dependent diabetes), allergias, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerular nephritis, hypoplastic anaemia, hepatitis, AIDS and transplant rejection (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFETA.

Or a humanised version of HFETA containing identical CDRs interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autoimmune diseases, allergy, arcopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulomephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS and organ graft rejection. The present sequence represents cDNA encoding the light chain of the murine anti-human Fas monochonal antibody HFETA, which is produced by hybridoma HFETA (FERM-BP-5828).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 117
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180

New humanized anti-Fas antibody, useful for treating or preventing inflammatory or autoimmune disease, induces apoptosis selectively icells with abnormal Fas-Fas ligand systems 2000-258930/23. P-PSDB; AAW90898

Example reference 4; Page 102-103; 263pp; English.

This invention describes a novel humanized anti-Fas antibody-like molecule (1) that, induces apoptosis in cells with an abnormal Fas/Fas ligand system, by binding to Fas on the cells with an abnormal Fas/Fas apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-anemic, antidiabetic, and transplant rejection. (1) selectively antibit apoptosis in normal cells will rejection. (1) selectively inhibit apoptosis in normal cells will rejection. (1) selectively inhibit disease models. (1) and transplant rejection. (1) selectively inhibit disease models. (1) and transplant rejection. (1) selectively inhibit disease models. (1) and transplant rejection. (1) selectively inhibit disease models. (1) act on the active site of Fas, i. e. they minic the native ligand, do not induce liver disease, and have reduced in the attive ligand, anti-murine anti-warm anti-murine anti-Ras monoclonal antibody response. This sequence encodes a method of the invention method of the invention.

The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs. It is highly safe in human dose. The present sequence represents the antibody 4H5 H chain encoding nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 925;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    15: Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel device (I) for separating cluster differentiation (CD)-positive cells using a recombinant chimeric or single-chain) antibody recognising CD4 or CD34. The devices are useful for the separation of CD4 or CD34 positive cells, which is useful for the collection of hematopoietic undifferentiated cells, elimination of lymphocytes from cells to be used in bone marrow transplantation, the detection of leukemic cells and the production of medicinal compositions for the treatment of HIV infection and autoimmune diseases this sequence encodes a murine derived protein fragment which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            or CD34 and their use for

The anti-human CD4 antibody 4H5 is used for the detection of antigen and application for drugs, I is highly safe in human dose. The present sequence represents the antibody 4H5 L chain encoding nucleotide

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

// lone lib="Soares mammary gland NMLMG"
// lone lib="Yector: pT73D-pac (Pharmacia) with a modified
// lone intermed from alactating female, and was then primed
polylinker; ist strand cDNA was prepared from mammary
gland tissue from a lactating female, and was then primed
with a Not I - oligo(dT) primer. Double-stranded cDNA was
ligated to Eco RI adaptors (Pharmacia), digested with Not
I and cloned into the Not I and Eco RI sites of the
modified pT7T3 vector. Library is normalized. Library
was constructed by Bento Soares and M. Fatima Bonaldo. "

Cloning of mouse genes related to repairing of intestinal
epithelium of the irradiated mice by treatment with the intestinal
RNA of mice of the same strain
